The ATI Companies Launch New Website

Welcome to the ATI Companies' new website, launched in July 2008: www.ambienttech.com. This new website gives us the opportunity to tell you what our companies do, how they might relate to your needs, and what their applications are for current and future projects.

During the last 15 years, the ATI Companies have experienced an exceptional, organic, growth that was recognized by the Tampa Bay Business Journal during their annual 2007 award event when they included ATI in their list of The Top Fifty Fastest Growing Companies in the Tampa Bay Area. This position was earned by the excellent relationships of trust and mutual respect we have developed with our clients and a corporate environment that fosters creativity and forward thinking in the reality of today's globalized world. While ATI is a Minority Business Enterprise and a Small Disadvantaged Business, we have tackled and completed some massive projects with the creativity, motivation, and people power that are well recognized in the industry.

We invite you to look at our new website, absorb what we have done, and challenge us with unique and difficult projects. We welcome the opportunity to work with you.

Come back often to see the ongoing updates to our Projects, Newsletters, and News Releases. We welcome your feedback.

Underground Utilities Designation Studies at Air Force Bases throughout the Continental United States

The ATI Companies conducted major underground utility mapping projects at multiple US Air Force Bases (AFBs) throughout the Continental US. All these investigations were conducted as part of an overall effort to update GIS databases and maps for this critical infrastructure at these facilities.

In 2008, ATI designated over 280 miles of buried primary and secondary electrical lines at Minot and Ellsworth AFBs in South and North Dakota, respectively. ATI located the primary and secondary distribution electrical lines and then marked the lines locations in the field in accordance with the accuracy standards and identifier protocols established by the AFBs for the project. Electronic utility locators were used to complete the work. In 2006, ATI mapped petroleum, oil, and lubricant (POL) lines at nine bases to the same standards as used in the electrical line surveys conducted at Minot and Ellsworth AFBs. Over 250,000 linear feet of POL lines were designated using electronic utility locators and ground penetrating radar.

Our expertise in Utility Designation and Mapping may be useful to your projects. Please call us at 727-328-0268 to review your needs.
